Test Case:
1) This test will help us to see all of the bots when we click on the "See All Bots" button.
2) This is a very simple test that will require us to click on the button and see if all of the bots are available for us to see.
3) When we press the "See All Bots" button we can't see the bots meaning there is something incorrect with the code.

Test Case 2:
1) This test is to see what happens when we win a duel.
2) We need to select two bots that we think can win a duel and when they duel, if they win, we should see results telling us we won and the win number should increase.
3) We can win but it gets recorded as a loss not a win.

Bug report:
1) Whether you win or lose, your results are counted as a loss.
2) I played six rounds and lost one of them but won five and I have six losses recorded.
3) When I win it should be counted as a win but that isn't happening.
4) I instead have six losses instead of only one.
5) My proof are the screenshots in my files called "Proof" and "Proof2".
